PRATIK GURJAR

BACKEND / PLATFORM ENGINEER, PAYMENTS INFRASTRUCTURE
pratikgurjar66@gmail.com | +91-6265038563 | Linkedin | Github | Indore, India | Immediate Joiner

SUMMARY

Backend engineer with 5 years in Java/Spring and Go, currently building card payments infrastructure at Razorpay across tokenization, EMV 3-D Secure authentication and payment routing for Axis, SBI Cards and Yes Bank.

SKILLS

Languages: Java, Go (Golang), SQL, JavaScript
Frameworks: Spring Boot, Spring MVC, REST APIs, Hibernate, JPA, React, Node.js, JUnit, Mockito
Data & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Kafka, SQS
Cloud & DevOps: AWS (EKS, Lambda, S3), Kubernetes, Docker, CI/CD (Spinnaker, Jenkins, GitHub Actions), canary, blue-green, disaster recovery
Payments & Observability: EMV 3-D Secure (3DS), ACS, tokenization, ISO 8583, EMI, reconciliation, PCI DSS, PGP/SFTP, Grafana, PromQL, Coralogix, Zenduty, SonarQube, JaCoCo
AI/ML: LLMs (Claude, Ollama, Gemini), MLOps, model deployment, GenAI

EXPERIENCE

Razorpay, Product Development Engineer II — July 2024 - Present

Card payments in Java, Spring Boot and Go: issuer-side tokenization (TokenHQ) and 3-D Secure (ACS), acquirer-side optimizer

- Owned the EMI rollout on the ACS, taking it live for **Yes Bank** and staging it for **SBI Cards**, behind a per-issuer config layer that leaves non-EMI banks untouched.
- Fixed a recurring P0 in end-of-day settlement reconciliation by batching per-record Hibernate queries and writes, cutting an 8,000-transaction run from **7-8 minutes to 20 seconds**.
- Took a merchant live on **Pine Labs card EMI**, built offer discovery and refund-cap handling in the **Go** gateway adapter, and diagnosed the plan-ingestion failure that blocked the rollout.
- Built Spinnaker **canary and disaster recovery pipelines** for the five-service 3-D Secure stack on Kubernetes across two issuer banks, with cross-region DR failover.
- On-call for the 3-D Secure stack. Improved production monitoring and alerting, and wrote the **42-scenario incident runbook** covering HSM, BIN lookup and OTP delivery.
- Worked across ISO 8583 transaction processing (jPOS) and the Spring Boot REST portals for **TokenHQ**, Razorpay's issuer tokenization platform, onboarding issuer banks to live traffic.
- Escalation point for **bank production incidents**, and ran vulnerability remediation and auditor walkthroughs for **PCI DSS** recertification.
- Led the test-coverage drive across four services, from **under 26% to over 90%**, with code review and a **JaCoCo/SonarQube** merge gate blocking regressions.
- Developed **end-to-end test suites** for the authentication server and the payment optimizer across five gateways, weighted toward failure paths.
- Contributed to Razorpay's internal **agent-skills** platform, scoping agent-readiness and integration-test requirements for the 3-D Secure authentication service.

Resultant Technologies Pvt Ltd, Software Engineer — Jul 2021 - Jun 2024, Indore

US Dept of Veterans Affairs claims and benefits platforms (VBMS)

- Redesigned exam-request and contention processing on the veterans claims platform, cutting processing time **20%**, and built payment-method management.
- Introduced **Redis caching** for read-heavy claims lookups, cutting p95 latency on those endpoints **30%**.
- Integrated a hospitalization reporting app with the **Claims Evidence API** in VBMS, giving case workers direct access to adjustment claims.

PROJECT

TableTalk *natural language to SQL, Java 21 / Spring Boot 3*

- Built a natural-language-to-SQL platform: a tool-calling LLM agent retrieves schema and generates SQL, which a JSqlParser AST guard and a read-only transaction with a statement timeout make it safe to run. React/TypeScript UI, 74 tests.

EDUCATION

National Institute of Technology, Tiruchirapalli, MCA in Computer Applications, 7.67 CGPA — 2021

ACHIEVEMENTS

- **AIR 77** in BIT MCA, **AIR 82** in NIMCET and **AIR 99** in KIITEE MCA entrance exams, 2018.
- **1st place**, Innovision, ACCUMEN'19 departmental technical symposium, ACM Student Chapter, NIT Trichy.

CERTIFICATIONS

- **Data Structures and Algorithms** (Scaler, 2023).
- **Containers with Docker, Kubernetes and OpenShift** (Coursera, 2022).
